LUXEON F Plus Cool White

Industry-leading solutions for low and high beam lamps

LUXEON F Plus Cool White LEDs are the only automotive LEDs that deliver design flexibility and advanced functionality. These products, with their miniaturized form factor, are designed to support daytime running lamps, front fog and low and high beam applications. The Lumileds automotive binning structure meets both SAE and ECE color specifications and is hot binned at 85°C, consistent with actual automotive operational environments. LUXEON F Plus Cool White provides an industry-leading solution for your front and rear applications. All LUXEON F LEDs are AEC-Q101 qualified.

**FEATURES AND BENEFITS**

- Higher drive current capability for increased flux performance
- Low thermal resistance for better hot lumen performance
- Standard packaging for low cost and ease of manufacturability
- Hot binned at 85°C MP to match closer to operating conditions
- IEC/PAS62707-1 White LED

**PRIMARY APPLICATIONS**

- Daytime Running Lights
- Front Fog
- Headlight
  - Low Beam
  - High Beam
  - Cornering Light

General Product Information

Product Test Conditions
LUXEON F Plus Cool White LEDs are tested and binned using a 20ms monopulse (MP) at 1000mA drive current, case temperature, $T_c$, of 85°C.

Part Number Nomenclature
Part numbers for LUXEON F Plus Cool White follow the convention below:

$L F M H - A B C - E F G H$

Where:
- $L$ designates LUXEON
- $F$ designates LUXEON F product family
- $M H$ designates hot binning
- $A$ designates color variant ($C$=White)
- $B$ designates die size ($1$=1mm$^2$)
- $C$ designates binning current ($C$=1000mA)
- $E$ designates future product offerings
- $F G H$ designates minimum luminous flux

Therefore, the following part number is used for a LUXEON F Plus Cool White with a minimum luminous flux of 268 lumens:

$L F M H - C 1 C - 0 2 6 8$

Environmental Compliance
Lumileds LLC is committed to providing environmentally friendly products to the solid-state lighting market. LUXEON F Plus Cool White is compliant to the European Union directives on the restriction of hazardous substances in electronic equipment, namely the RoHS Directive 2011/65/EU and REACH Regulation (EC) 1907/2006. Lumileds LLC will not intentionally add the following restricted materials to its products: lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBB) or polybrominated diphenyl ethers (PBDE).
Performance Characteristics

Product Selection Guide

Table 1. Product selection for LUXEON F Plus Cool White at 20ms MP test current, T_c=85°C.

<table>
<thead>
<tr>

</tbody>
</table>

Notes for Table 4:
1. Proper current derating must be observed to maintain junction temperature below the maximum, so that the LED is maintained below the maximum rated operating case temperature. LUXEON F Plus Cool White LEDs driven at or above the maximum rated operating case temperature may have shorter lifetime.
2. Measured using human body model (per JESD22 A114), machine model (per JESD22 A115) and charged device model (per JESD22 C101F).

Product Bin and Labeling Definitions

Designing with LUXEON F Plus Cool White
Flux bins supportable for car programs depend on product color and program start- and end-of-production date. Flux roadmaps by year and product color are maintained and available from the sales representative. Please contact local sales representative to request the flux bin range with best supportability for program timing.

Decoding Product Bin Labeling
In the manufacturing of semiconductor products, there are variations in performance around the average values given in the technical datasheets. For this reason, Lumileds bins the LED components for luminous flux or radiometric power, forward voltage, color point, peak wavelength, or dominant wavelength.

LUXEON F Plus Cool White LEDs are labeled using a 4-digit alphanumeric CAT code following the format below:

\[ \text{A B C D} \]

Where:

- **A** – designates luminous flux bin (example: W=268 to 288 lumens)
- **B C** – designates color code (example: 1A, 1B, 1C, 1D)
- **D** – designates forward voltage bin (example: B=2.55V to 2.79V)

Therefore, a LUXEON F Plus Cool White with a lumen range of 268 to 288, color bin of 1D and a forward voltage of 2.55V to 2.79V has the following CAT code:

\[ \text{W 1 D B} \]

Luminous Flux Bins
Table 6 lists the standard photometric luminous flux bins for LUXEON F Plus Cool White emitters. Product availability in a particular bin varies by color and platform start of production date. Contact local sales representative for best supportability of programs.

<table>

</tbody>
</table>

Notes for Table 6:
1. Lumileds maintains a tolerance of ±6.5% on luminous flux measurements.
Color Codes

Notes for Figure 12:
1. Lumileds supports the following bins for LUXEON F Plus Cool White: 1D, 2C, 3B and 4A.
2. LUXEON F historical large color notations. Color bins must be ordered by fine bin designators, shown below.
   - H1 = 1A, 1B, 1C, 1D
   - H2 = 2A, 2B, 2C, 2D
   - H3 = 3A, 3B, 3C, 3D
   - H4 = 4A, 4B, 4C, 4D
   - HC = 1D, 2C, 3B, 4A

About Lumileds

Companies developing automotive, mobile, IoT and illumination lighting applications need a partner who can collaborate with them to push the boundaries of light. With over 100 years of inventions and industry firsts, Lumileds is a global lighting solutions company that helps customers around the world deliver differentiated solutions to gain and maintain a competitive edge. As the inventor of Xenon technology, a pioneer in halogen lighting and the leader in high performance LEDs, Lumileds builds innovation, quality and reliability into its technology, products and every customer engagement. Together with its customers, Lumileds is making the world safer, better and more beautiful—with light.

To learn more about our lighting solutions, visit lumileds.com.
