LUXEON FX Plus Cool White

Industry-leading CSP solutions for low and high beam lamps

LUXEON FX Plus Cool White LEDs, with their Chip Scale Packaging (CSP) form factor, are designed to support low and high beam applications, daytime running lamps and front fog. The Lumileds automotive binning structure meets both SAE and ECE color specifications and is hot binned at 85°C, consistent with actual automotive operational environments. All LUXEON FX LEDs are AEC-Q102 qualified.

FEATURES AND BENEFITS

- Higher drive current capability for increased flux performance
- Low thermal resistance for better hot lumen performance
- Chip Scale Packaging for low cost and ease of manufacturability
- Hot binned at 85°C MP to match closer to operating conditions
- IEC/PAS 62707-1 White LED

PRIMARY APPLICATIONS

- Daytime Running Lights
- Front Fog
- Headlight
  - Low Beam
  - High Beam
  - Cornering Light

General Product Information

Product Test Conditions
LUXEON FX Plus Cool White LEDs are tested and binned using a 20ms monopulse (MP) at 1000mA drive current, case temperature, $T_c$, of 85°C.

Part Number Nomenclature
Part numbers for LUXEON FX Plus Cool White follow the convention below:

$$A \ 1 \ F \ X \ - \ A \ B \ C \ D \ E \ F \ G \ H \ J \ K \ M \ N \ P$$

Where:

- **A B C D** – designates CCT or wavelength (example: 5850 for white)
- **E** – designates product generation (example: A=Gen 1, B=Gen 2)
- **F** – designates test current (A=350mA, B=500mA, C=700mA, D=1000mA)
- **G** – designates test temperature (C=25°C, H=85°C)
- **H** – designates future product offerings (2=Gen 4+)
- **J K M N** – designates minimum luminous flux (example: 0270=270 lumens, 0300=300 lumens, etc.)
- **P** – designates option code for distribution

Therefore, the following part number is used for a first generation LUXEON FX Plus Cool White LED with a test current of 1000mA, test temperature of 85°C and a minimum luminous flux of 270 lumens:

$$A \ 1 \ F \ X \ - \ 5 \ 8 \ 5 \ 0 \ A \ D \ H \ 2 \ 0 \ 2 \ 7 \ 0 \ 0$$

Environmental Compliance
Lumileds LLC is committed to providing environmentally friendly products to the solid-state lighting market. LUXEON F is compliant to the European Union directives on the restriction of hazardous substances in electronic equipment, namely the RoHS Directive 2011/65/EU and REACH Regulation (EC) 1907/2006. Lumileds LLC will not intentionally add the following restricted materials to its products: lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBB) or polybrominated diphenyl ethers (PBDE).
Performance Characteristics

Permissible Pulse Handling Characteristics

Figure 10. Permissible pulse handling capability for LUXEON FX Plus Cool White.
Product Bin and Labeling Definitions

Designing with LUXEON FX Plus Cool White

Flux bins supportable for car programs depend on product color and program start and end of production date. Flux roadmaps by year and product color are maintained and available from the sales representative. Please contact your local sales representative to request the flux bin range with best supportability for program timing.

Decoding Product Bin Labeling

In the manufacturing of semiconductor products, there are variations in performance around the average values given in the technical datasheets. For this reason, Lumileds bins the LED components for luminous flux, color and forward voltage.

LUXEON FX Plus Cool White LEDs are labeled using a 4-digit alphanumeric CAT code following the format below.

\[
\text{A B C D}
\]

Where:

- A \text{ – designates luminous flux bin (example: E=270 to 280 lumens, H=300 to 310 lumens)}
- B C \text{ – designates color bin (example: 1D, 2C, 3B, 4A)}
- D \text{ – designates forward voltage bin (example: B=2.55V to 2.79V, D=3.03V to 3.27V)}

Therefore, a LUXEON FX Plus Cool White with a lumen range of 300 to 310, color bin of 1D, and a forward voltage range of 2.55V to 2.79V has the following CAT code:

\[
H 1 D B
\]

Luminous Flux Bins

Table 6 lists the standard luminous flux bins for LUXEON FX emitters. Although several bins are outlined, product availability in a particular bin varies by production run and by product performance. Not all bins are available in all colors.

Product Labeling

LUXEON FX Plus LEDs are packaged in moisture barrier bags on reels. Both moisture barrier bag and reels have printed information providing part numbers with CAT codes that indicate luminous flux, color and forward voltage bins.

Figure 15. Example of a product label for LUXEON FX Cool White.

Notes for Figure 15 - Box Label descriptions for customer use:
Field labels not described are for Lumileds internal use only.
1. Total number of LED emitters in a shipment box.
2. Lumileds part number
3. Customer part number for custom requests only.
4. LED test date in YYYY format.
5. Unique product lot identification number. This number is required for traceability purposes.
6. Country code of origin of manufacturing of part (e.g. MY for Malaysia, CN for China) according to ISO 3166-1 alpha-2 document.
7. Product bin 4-digit alphanumeric CAT code.
About Lumileds

Companies developing automotive, mobile, IoT and illumination lighting applications need a partner who can collaborate with them to push the boundaries of light. With over 100 years of inventions and industry firsts, Lumileds is a global lighting solutions company that helps customers around the world deliver differentiated solutions to gain and maintain a competitive edge. As the inventor of Xenon technology, a pioneer in halogen lighting and the leader in high performance LEDs, Lumileds builds innovation, quality and reliability into its technology, products and every customer engagement. Together with its customers, Lumileds is making the world better, safer, more beautiful—with light.

To learn more about our lighting solutions, visit lumileds.com.
